Professional Summary

Full-Stack MERN Developer with hands-on internship experience building AI-powered platforms for 100+ users. Proficient in React.js, Node.js, Express.js, MongoDB, real-time systems (WebRTC, Socket.IO), and REST API development. Currently expanding into machine learning (regression models, decision trees, data analysis with NumPy and Pandas), LLM API integration, and Next.js. Hackathon winner with a track record of shipping production-ready features in fast-paced teams.

Education

Guru Gobind Singh Indraprastha University

2024 – 2028

B.Tech in Computer Science

Delhi

Experience

Software Developer Trainee

June 2026 – August 2026

Indovision Services Pvt Ltd

On-site

- Design and develop end-to-end full-stack applications using Python, Django, and FastAPI for backend services, and Next.js for scalable, responsive frontend interfaces.
- Integrate Model Context Protocol (MCP) into application workflows to enable structured AI-driven data exchange, improving system interoperability and development efficiency.

Full Stack Developer Intern

Feb 2026

Vizuara Technologies

Remote

- Developed interactive AI-learning web platforms used by 100+ school students, collaborating across engineering, product, and research teams.
- Built and maintained full-stack features using React, Node.js/Express, and MongoDB, including REST API integrations and database schema design.

Projects

SnapClass – AI-Powered Dual-Biometric Attendance System | *Python, dlib, Resemblyzer* | [Live Demo](#) | [GitHub](#) **2026**

- Built a dual-biometric classroom attendance platform combining facial recognition (dlib, ResNet, 128-D embeddings) and voice-print verification (Resemblyzer, Librosa, 256-D embeddings), cutting manual roll-call time by 90% and eliminating proxy attendance.
- Designed a Supabase (PostgreSQL) backend with role-based access control and bcrypt password hashing, plus QR-code one-click course enrollment (Segno) and Pandas-driven real-time attendance analytics dashboards.

Video Calling App | *React.js, WebRTC, Socket.IO, Node.js, MongoDB, JWT* | [Live Demo](#) | [GitHub](#)

2025

- Built a full-stack peer-to-peer video conferencing platform with real-time signaling via Socket.IO and P2P streaming via WebRTC, supporting screen sharing and in-call chat.
- Implemented JWT-based authentication, MongoDB session and meeting history storage, and a responsive React UI deployed on Render with sub-2s connection latency.

Technical Skills

Languages: C/C++, Python, JavaScript, TypeScript, HTML, CSS, SQL

Frontend / Backend: React.js, Node.js, Express.js, REST APIs, WebRTC, Socket.IO, Axios

Databases: MongoDB, PostgreSQL

Data Science & ML: NumPy, Pandas, EDA, Data Visualization, Logistic Regression, Linear Regression

Concepts: Data Structures & Algorithms, Object-Oriented Programming, System Design

Tools: Git/GitHub, Vercel, Render, Netlify, Postman, VS Code, Docker

Achievements

Hackathon Winner - Vihaan 9.0, IEEE DTU

2025

WIE Category

- Built a low-latency assistive communication tool with an optimized keypress-to-streaming pipeline; won among 150+ competing teams.
